REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For Month of July, 1909

DEATHS

Four hundred and sixty-two deaths were registered this month or 24 less than in May, 1908 and 70 less than the same month of 1907. The mortality rate in 1908 per 1000 of population (425,000) was 11.34. This month it is 9.74 (population, 475,000). In 1907 it was 11.91. Following is a comparative table showing the deaths from some of the principal causes in the month of July for the past three years.

	1907	1908	1909
Total deaths from all causes	532	486	462
From			
Tuberculosis	34	45	44
Pneumonia, Lobar	27	21	17
Pneumonia, Broncho	24	12	5
Organic Heart diseases	78	53	63
Bright's disease	21	27	19
Diseases digestive system	61	61	44
Typhoid fever	15	6	5
Diphtheria	4	3	3
Scarlet fever			1
Whooping cough	3	4	5
Diseases Early Infancy	116	23	29
Deaths from violence	59	54	47

BIRTHS

Births registered total 589 as against 557 in May, 1908 and 442 in 1907. The birth rate in 1907 was 11.53 per thousand; in 1908 it was 15.72 (est. pop. 425,000); this month it is 14.88 (pop. 475,000). These figures indicate that the efforts of this department toward securing proper registration of all births occurring in the city, have met with a fair measure of success.

CONTAGIOUS DISEASES

The following table will indicate cases of contagious diseases reported during month and figures showing comparisons for three years past.

Diphtheria 38 35 2	July, 1907 July, 1908 July, 1909	
Diphtheria 38 35 2	— . — . — . — . — . — . — . — . — . — .	
	38 35	Diphtheria

Whooping Cough		
Mumps		
Chicken-pox. 10 10		
Cerebro Spinal Meningitis		
Pneumonia. 26 23 3	99 90	Tarana Maria and Araba and
Tuberculosis. 27 74 10	05 54 100	
Typhoid Fever		

In the Division of Sanitary Inspection, under the heading of "Contagious Diseases," it will be noticed that there is a marked derease in the number of certain infectious diseases as compared with the month of June. This is best indicated by the following able, showing the cases occurring in sanitary districts.

	No. (Cases.
Diseases.	June.	July.
Diphtheria	27	13
Scarlatina	33	18
Smallpox		0
Measles	88	9
Chicken Pox.	19	2
Mumps		1
Typhoid Fever	20	19
Whooping Cough	23	27

Experience has shown that in July this city is usually more free of contagious diseases than in any other month of the year. It yould be hardly fair to say that the season alone has all to do with this change in conditions, yet the usually even temperature may aildly govern the propagation of infective agents, although without a doubt the annual school vacation with its consequent scattering f children and the change to out-door life that many of them enjoy contributes greatly to this favorable showing.

While the vacation period materially reduces the number of cases of so-called "children's diseases," it would appear that a numper who leave the city during this period contract typhoid fever, probably through lack of diligence in ascertaining the source of their ood or water supply, and infection results from the ingestion of some contaminated agent, with the result that the number of Ty-hold Fever cases in the city are augmented, though the original source of infection is at some point remote from here.

The Sanitary Inspectors in their reports to the Health Officer lay particular stress on the fact that a large proportion of typhoid ases reported are those that occur in persons sent from outside counties to be treated in city hospitals, and from the history obtained n many instances it would appear as if a focus of infection existed in the northern part of the State. On page 12 will be found the abulated report of Sanitary Inspection.

Industrial Inspection

The general condition of factories, manufacturing establishments, etc., has greatly improved, many of these places having installed ystems of forced air ventilation, thus improving the air supply to employees.

The appearance and condition of scavenger, swill and manure wagons indicate that they are conducted and maintained in a sani-

The street-cars in operation in the city now undergo cleaning and disinfection regularly, with the result that their appearance and anitary condition have much improved. For report see page 15.

Market Inspection

The Inspectors in this division report that the conditions in Butchertown, where is located the abattoirs, are about to be greatly mproved by the installation of a new sewer system for the district. Most of the abattoirs are of modern construction, equipped with a good supply of water for cleansing and flushing purposes. The walls and floors of killing rooms are thoroughly cleansed at the lose of each day. Very little refuse is now discharged into the bay, most of this matter being reduced to fertilizing material. Abatoirs, corrals and pens are whitewashed and painted at frequent intervals.

In the wholesale district most of the temporary structures have given way to brick or concrete buildings, with the result that

onditions show a marked improvement, viewed from a sanitary standpoint.

Meat shops and stalls in the Chinese quarter are reported to be in a very good condition, all of these places being of up-to-date onstruction, clean and sanitary in every respect. This applies to fish and poultry stalls as well. For detailed report of work perormed and condemnations made by this corps, see page 14.

Division of Food-Milk-Dairy Inspection

The Food Inspectors have devoted much time to enforcing the regulations of the food and fruit screening ordinance, with a special iew to having all fruit peddlers using wagons keep their wares protected from dust, flies, etc., by the use of properly arranged screens. luch good has been accomplished in this direction and the result has been an improvement in the appearance of the vehicles and the vares conveyed therein. Report of this Bureau appears on page 13.

The milk and Dairy Inspectors report that the sanitary conditions of dairies and dairy depots throughout the city are very satisactory and the proprietors of these places are rapidly complying with the regulations of this department with reference to placing heir premises in such a condition as to comply with the city ordinances regulating conduct of dairies. For reports of these Bureaus

ee page 13.

School Medical Inspection

Owing to the fact that all public schools were closed during this month on account of annual vacation, no school work was done. 32 "home" visits were made.

Insanitary Premises Condemned by Board

Forty-two new cases of insanitary premises were brought before the Board for condemnation and vacation, and final action was aken on 4 cases postponed from previous months—total, 46 cases; 34 condemned, 12 nuisances abated by repair, 6 by demolition, otal 18; in process of abatement, 20. Full report appears on page 15.

Division of Laboratories

A full and complete report of work performed by Chemical Laboratory appears on page 17. One hundred and eighty-four samles milk, 10 of meat, 34 of water and 3 miscellaneous were subjected to analysis—total, 231. Reports Bacteriologist and Toxicologist n page 16.

Arrests

Thirty-six arrests were made during month and \$335 in fines were imposed in July cases, and \$35 from cases where arrests were nade in previous months—total, \$370. Attention is directed to page 20 for a full record of arrests made.

CHEMICAL LABORATORY

C. W. BEAVER, Chief Chemist

C. F. HOYT and R. A. JONES, Asst. Chemists

The work of the Chemical Laboratory for the month of July consisted of the analysis of 184 samples of milk, 10 samples of meat, 2 samples of cream, 1 sample of vinegar and 34 samples of water. Total number of analyses 231.

MILK

Samples taken from milk wagons. Samples taken from milk depots. Samples taken from shippers. Samples taken from restaurants. Samples taken from bakeries. Samples submitted by public institutions. Samples submitted by private individuals.	2; below standard. 54; below standard. 7; below standard. 1; below standard. 12; below standard.	2 6 2 1 3
Total number of samples analyzed	23.4.	43

Following are the cases ordered arrested with the deficiency in each case:

	DEFI	CIENCY	
NAME	Milk	Solids	Added
	Fats	Not Fat	Substance
P. Menjou, 528 Cambridge street (wagon).	0.3		
Bulhe & Mondott, Woolsey and University streets (wagon)	0.15	0.67	Water
F. Marty, 901 Silver avenue (wagon)	0.55	1.72	Water
J. A. Christen & Sons, 1427 Valencia street (wagon)	0.35		
C. M. Hawes, 20th and Connecticut streets, Bay State Dairy (wagon)	0.75	1.42	Water
J. Tamony, 206 Ninth street (bakery)	0.4		
La Brucherie Bros., 400 Harvard street, Excelsior Ranch (wagon)	0.5		
J. I. Brazil, Ignacio (shipper).	0.4		
C. M. Hawes, 488 Connecticut street (wagon)	0.45	0.1	
V. Sartori, 516 Laguna street (depot)	0.5	0.2	
P. Menjou, 21st and Folsom streets (wagon)	0.35		
Mrs. C. Gilligan, Visitacion Valley (wagon).		0.82	Water
C. M. Hawes, 20th and Connecticut streets (depot).		0.38	

COURT RECORD (MILK CASES)

Cases in Court	38	Convictions	23
Cases carried over	8	Dismissals	7
Total amount of fines	\$345	Average fine\$	15

MEAT

Number of samples analyzed (representing 10 dealers)	10
Number of samples found to contain chemical preservatives (representing 6 dealers)	- 6
Ordered arrested	- 6

Following are the cases ordered arrested with the adulteration in each case:

NAME	SUBSTANCE	ADULTERATION
C. Fritz, 3208 Mission street.	Hamburg	Sulphites
P. J. Schenkel, 1292 Valencia street		Sulphites
J. Hayden, 1146 Valencia street		Sulphites
M. M. Bates, 938 Valencia street		Sulphites
J. L. Wilbur, 613 Laguna street	Hamburg	Sulphites
Schrader Bros., 501 Hayes street	. Hamburg	Sulphites

COURT RECORD (MEAT CASES)

Cases in Court	5	Convictions
Cases carried over	0	Dismissals 4
Total amount of fines\$	25	Average fine

MISCELLANEOUS

The two samples of cream analyzed were not found to be adulterated. The sample of vinegar was from a lot furnished to the City and County Hospital by A. J. Ranken Company. According to contract, the vinegar was to be pure apple vinegar. It was found to be distilled vinegar colored with caramel coloring.

WATER

Sanitary analyses were made of 34 samples of water taken from the following sources: City Distributing Reservoirs and the Lakes Merced examined twice during the month, 22 samples; Golden Gate Park Water Supply, 7 samples; County Line Water Co., 3 samples; miscellaneous, 2 samples.

Following are the tables of analytical results obtained by the analysis of the above mentioned samples:

CHEMICAL LABORATORY—Cont'd

TABLE OF ANALYSES OF SAMPLES OF SPRING VALLEY WATER COMPANY'S WATERS TAKEN FROM CITY DISTRIBUTING RESERVOIRS AND THE LAKES MERCED

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For Month of August, 1909

DEATHS

Four hundred and fifty deaths were registered this month or 38 less than in August, 1908, and 40 less than the same month of 1907. The mortality rate in 1908 per 1000 of population (425,000) was 13.68. This month it is 11.36 (population, 475,000). In 1907 it was 13.80. Following is a comparative table showing the deaths from some of the principal causes in the month of August for the past three years.

· ·	1907	1908	1909
Total deaths from all causes.	490	488	450
From Tuberculosis	55	54	31
Pneumonia, Lobar. Pneumonia, Broncho.	23 9	$\begin{array}{c} 22 \\ 13 \end{array}$	$\frac{25}{6}$
Organic Heart diseases Bright's disease.	66 18	50 34	$\begin{array}{c} 56 \\ 32 \\ \end{array}$
Diseases digestive system Typhoid fever	56 8	55 7	38 8
Diphtheria. Scarlet fever. Whories and the state of the s	4	5 •••	1
Whooping cough. Diseases Early Infancy.	3 18	5 28	16
Deaths from violence	51	54	50

BIRTHS

Births registered total 540 as against 525 in May, 1908 and 395 in 1907. The birth rate in 1907 was 11.14 per thousand; in 1908 it was 14.76 (est. pop. 425,000); this month it is 13.56 (pop. 475,000). It will be noticed that there is quite an increase in the number of births registered, as compared to deaths recorded. This is best illustrated by the comparative tables appearing on page 6, which show that for many months the number of deaths exceeded the births reported. The enforcement of the birth registration law has changed these conditions.

CONTAGIOUS DISEASES

The following table will indicate cases of contagious diseases reported during month and figures showing comparisons for three years past.

	Aug., 1907	Aug., 1908	Aug., 1909
Diphtheria	38	30	27
Scarlet Fever	4	11	22
Smallpox	11	16	
Measles	59	$3\overline{2}$	11
Whooping Cough	5	17	26
Mumps	1	4	7
Chicken-pox	2	13	2
Cerebro Ŝpinal Meningitis	5	3	1
Pneumonia	18	10	32
Tuberculosis	52	91	90
Typhoid Fever	37	24	38
Bubonic Plague	14		

DIVISION OF SANITARY INSPECTION

The Sanitary Inspector of District No. 1, which includes what is known as the North Beach and Potrero Districts, reports that during the month eight cases of diphtheria were brought into the city from the Telegraph Hill Association's Farm in Marin County. These cases were all local orphan children, who had been sent into the country for the benefit of their health. The source of the infection is not positively determined, though the fact that during July 40 or 50 children visited the farm and afterwards returned to the city, might have some bearing on the case.

If the above mentioned eight cases be excluded, there has been no increase in cases of diphtheria over the month of July. Scarlet Fever shows an increase of three cases over those of last month. Five cases of typhoid fever investigated, three of these being

of local origin. The same number were reported during July.

District No. 2—The Western Addition, Sunset and Richmond—shows 13 cases of diphtheria as against 10 for July. Scarlet fever 14 cases in July, 8 cases in August. Of typhoid fever, 12 cases were investigated in August, against 14 in July. Whooping

cough, mumps and measles show a slight increase over preceding month.

In District No. 3, embracing the Mission District and Bernal Heights, 98 cases of illness, classified as reportable diseases, were noted. Of these, 30 were tuberculosis cases. Typhoid comes second with 21 cases, thirteen of these being of local origin, the remaining cases coming from the northern section of the State. Two cases were discovered that were apparently due to direct

ontact. A history of eating green fruits and vegetables, or of food which was exposed to infection by flies was nearly in all cases btained.

Four cases of amebic dysentery were also investigated. The history of three of these seemed to indicate origin outside of the ity, probably contracted while on a visit to Tahiti.

Diphtheria, scarlet fever, measles and whooping cough do not show any increase over the month of July.

A full tabulated report of work performed by this corps will be found on page 10; also report of Division Sanitary Disinfection.

DIVISION OF PLUMBING INSPECTION

The Inspectors in this division report that good progress is being made in the direction of cleaning and flushing sewers throughut the city. Many new catch-basins for storm-waters are being installed. These are now made with concrete bottoms, and utlets are properly trapped. Where sanitary sewers are in place, all restaurants, etc., with outlets thereto are compelled to put in grease traps," thus preventing clogging up of main sewer.

In the Sunset and Richmond Districts main sewers are being laid, and, when these are completed, many houses now having cess-

ools will be obliged to connect with the sewer, thus improving sanitary conditions in this district.

In the Mission District many main sewers and catch-basins have been cleaned and flushed, making a decided improvement in ealth conditions. The main sewer in Fifth street, between Mission and Howard, has been reconstructed, and many nuisances rising from backing of sewage matter into vacant lots have thus been abated.

Many new buildings are now in course of erection in various sections of the city, and the re-modeling of old structures which

ecessitates all new plumbing work to be installed, commands the constant attention of this corps.

In every section of the city new sewers are being installed under the direction of the Board of Public Works, and when these re completed and ready for use, many complaints now arising from lack of proper sewer facilities will be abated.

Full report of work of this division appears on page 13.

DIVISION OF DAIRY & MILK INSPECTION

All dairies in outside counties supplying milk to this city were inspected during month. These dairies are located in Alameda, Iarin, Santa Clara, Napa, Sonoma, Solano, San Joaquin and Contra Costa counties. At this time the milk supply for the city comes om 109 dairies outside the county and from 31 within the city and county limits.

The outside dairies are beginning to show an improvement in their general sanitary condition and many owners show a comendable desire to conform to the regulations of this department. Much work is now under way and by October it is expected that

onditions will be very much improved throughout the counties above enumerated.

Ninety-eight milk depots throughout city were inspected during month, also 44 dairies. 11,034 cows were inspected, 36 laced under quarantine and 12 condemned and killed. 115 milk cans were also condemned as unfit for further use. 357 samples f milk were taken for chemical analysis. Six offenders were arrested and \$160 in fines imposed. See page 11 for full detailed

SCHOOL MEDICAL INSPECTION

For report of work performed in this division see page 14. Active work has been resumed in this line, the summer school vacaon having ended.

BOARD ACTIONS

Forty-four new cases of insanitary premises were brought before the Board. A full report of the disposal of these and other cases opears under its appropriate heading on page 13.

DIVISION OF LABORATORIES

On page 15 appears a very complete report of work performed by Chemical Laboratory. 422 samples were analyzed, includg 365 milk, 18 meat, 37 water, 2 miscellaneous. Results are given in detail under heading above mentioned. For reports Bacteriologist and Toxicologist, see page 14.

ARRESTS

Fourteen arrests made during month and \$165 in fines imposed on offenders arrested in August. \$110 fines collected on cases om previous months. Total, \$275. Attention is called to page 18 for a full record of work done in this connection.

CHEMICAL LABORATORY

C. W. BEAVER, Chief Chemist

C. F. HOYT and R. A. JONES, Asst. Chemists

The work done in the Chemical Laboratory during the month of August consisted of the analysis of 422 samples, as follows: Milk, 365 samples; meat, 18 samples; water, 37 samples; vinegar, 1 sample; cream, 1 sample.

Cases carried over		. Dismissals	
Total amount of fines	\$30	Average fine	

CHEMICAL LABORATORY-Cont'd

MISCELLANEOUS

One sample of cream was analyzed. It was not found to be adulterated. One sample of vinegar was analyzed. This sample was from a lot furnished to the City and County Hospital by the A. J. Ranken Co., 550 Fremont street. It was found to satisfy the Federal and State standards for apple vinegar.

WATER

Sanitary analysis was made of 37 samples of water from the following sources: City distributing reservoirs and the Lakes Merced of the S. V. Water Co., examined twice during the month, 22 samples; wells, 3 samples; sea-water, 5 samples; properties of the County Line Water Co., 5 samples; miscellaneous, 2 samples.

The building of swimming tanks to be filled with sea-water has been proposed. Therefore analysis of the samples of sea-water

was made for the purpose of ascertaining the condition of contamination at different points.

The samples of water from the properties of The County Line Water Co. were taken from wells and a spring. One well about 130 feet deep, cased with galvanized iron, furnishes the main supply of the company, and a spring at the back of a 300-foot tunnel in a side hill furnishes an auxiliary supply. Both wells and spring are located in the City and County of San Francisco.

Following are the tables of analytical results obtained by the analysis of the samples of fresh water mentioned above:

TABLE OF ANALYSES OF SAMPLES OF SPRING VALLEY WATER COMPANY'S WATERS TAKEN FROM CITY DISTRIBUTING RESERVOIRS AND THE LAKES MERCED (PARTS PER 1,000,000)

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For Month of September, 1909

DEATHS

Four hundred and twenty-four deaths were registered this month or 23 less than in August, 1908, and 59 less than the same month of 1907. The mortality rate in 1908 per 1000 of population (425,000) was 12.60. This month it is 10.70 (population, 475,000.) In 1900 it was 13.44. Following is a comparative table showing the deaths from some of the principal causes in the month of September for the past three years:

	1907	1908	1909
Total deaths from all causes	483	447	424
From			
Tuberculosis	48	50	42
Pneumonia, Lobar	27	23	16
Pneumonia, Broncho	8	7	8
Organic Heart diseases	52	49	63
Bright's disease	22	21	22
Diseases digestive system	55	54	40
Typhola lever	16	5	5
Diphtheria	4	3	1
Scarlet fever			4
Whooping cough	. 1	3	$\bar{2}$
Diseases Early Infancy	15	14	18
Deaths from violence	46	42	37

BIRTHS

Births registered total 587 as against 515 in September, 1908 and 474 in 1907. The birth rate in 1907 was 12.32 per thousand in 1908 it was 14.52 (est. pop., 425,000); this month it is 14.83 (pop. 475,000).

CONTAGIOUS DISEASES

The following table will indicate cases of contagious diseases reported during month and figures showing comparisons for thre years past.

	Sept. 1907	Sept. 1908	Sept. 1909
Diphtheria	30	36	30
Scarlet fever	17	18	47
Smallpox	6	12	
Measles. Whooping cough.	4	7	15 26
Mumps		5	18
Chicken-pox	. 10	7	11
Cerebro Špinal Meningitis. Pneumonia.	17	13	26
Tuberculosis	48	88	112
Typhoid fever	39	22	26
Bubonic Plague	99		

The contagious diseases show a slight increase in the number reported for the past month of Cerebro Spinal Meningitis, Scarle Fever, Tuberculosis, Parotitis, Varicella.

The increase of Scarlet Fever is the result of twenty cases which occurred in the Chinese Mission at 921 Sacramento Street, 19 o which were contacts with an unrecognized case in that institution, and segregation occurred only after a number of other children were taken sick. All of these cases are reported as recovering, and fumigation of the entire institution has been performed.

It will be noticed that there is a decrease of 22 cases of Typhoid Fever as compared to August. This latter month always shows a high count and is perhaps the result of people returning from their annual vacations where the infection is contracted. Many States recognize this fact and warnings are sent out to the public, and also to the health resorts, advising them of the dangers and the methods of contracting Typhoid.

It will be further noted that Varicella and Parotitis show an increase in September over the month of August, and just why thidoes occur the Sanitary Inspectors have endeavored to determine, but so far no reasonable explanation has been deduced.

A tabulated report of the Division of Sanitary Inspection appears on page 12.

DIVISION OF MARKET INSPECTION

The Market Inspectors report that sanitary conditions of meat markets, butcher shops and poultry stores throughout the city are constantly being bettered. In many places old wire screen doors and windows are giving way to plate glass fronts, making a very marked difference in the outside appearance of such places, and a consequent improvement in general hygenic conditions thereof the Inspector detailed to duty at the wharves to overlook shipments of dressed calves and hogs reports that much improvement

is to be noted in the method of handling this class of carcasses. The old system of heaping them up indiscriminately has been abandoned and hooks are now provided for hanging same, thus keeping them clear of the floor, and away from dirt and rodents. All dressed beef and hogs are wrapped in burlap before being shipped. All classes of these products are being handled in a very cleanly manner.

In Butchertown, where the abattoirs are located, the Inspectors detailed to duty in this district report that these places are now n a better condition than ever before in their history, and conditions are improving all the time. All offal and animal matter is emoved from these places daily, and all tanks and floors thoroughly cleaned and afterwards disinfected. Instead of being ischarged into the waters of the bay all condemned meats are removed to the Reduction Works. For detailed report see page 14.

DIVISION OF FOOD AND INDUSTRIAL INSPECTION

The Food Inspectors have been devoting their efforts towards locating spoiled canned goods stored in various warehouses throughbut the city with the result that 300 cases of canned pineappple and 200 of canned tomatoes were placed under quarantine pending sorting of cans. All "swell head" cans are promptly punctured, coal-oiled and removed to Reduction Works and there destroyed under personal supervision of an Inspector.

The provisions of the screening law, particularly as applied to fruit and vegetable dealers, hucksters, etc., are being very rigidly enforced and the Police Department has issued orders to its officers to promptly arrest any dealer whose doors are found open or if

his wares are left on the sidewalk.

The Industrial Inspector reports that the sanitary conditions of bake-shops and restaurants throughout city can be called "fair." Those that are located in new buildings are in good shape. Many are located in what is known as "temporary" structures and these require constant attention from the Inspector. This condition will be remedied as the temporary buildings give way to modern structures. Food Inspection report appears on page 13. Industrial Inspector report on page 15.

DIVISION OF DAIRY & MILK INSPECTION

The dairies of Marin, Napa, Sonoma and Solano counties were re-inspected during this month. Conditions are constantly improving and the dairymen show a desire to comply with the suggestions offered to enable them to place their premises in such shape as to

comply with the requirements of the Board of Health.

The dairy depots within the city have been given personal attention by the Chief Dairy Inspector and in many cases instructions have been issued to partition milk-rooms and wash-room from the driveways and thus protect the milk from flies, dust, etc. The practice of boiling or heating of milk in the delivery cans, which prevailed amongst restaurant keepers, etc., has also been given attention and offenders have been warned to desist under penalty of arrest.

One hundred and twenty-four dairy cattle were subjected to the Tuberculin test.

It is estimated that 23,500 gallons of milk per day were shipped into the city during the month from outside points. Full report appears on page 13.

DIVISION OF PLUMBING INSPECTION

The Inspectors in this division report that a large amount of public work, viz.: repairing of streets and sewers, is being perormed throughout the city. Numerous cases of obstructed cesspools and sewers have been reported to the Board of Works, and prompt attention has been given to cleaning and flushing same.

New sewers are being installed in the Potrero District and when completed will afford connection to many premises now without

ony sewer service whatever. This will improve the sanitary conditions in this district immensely.

On the water-front, commonly known as the "tide-water" district, many storm sewers have been installed with the result that the stoppages in house sewers occur less frequently. Most architects are now specifying separate rain-water systems for buildings

A new main sewer in Laguna Street from Filbert is rapidly approaching completion. This will be one of the main discharging outlets for the district from Van Ness Ave. to Fillmore and from Broadway to the bay and will assist materially in improving sanitary

conditions in this vicinity.

In the Plumbing Department it will be noticed that there has been a material falling off in the number of plans submitted and new buildings represented, and this is in part one of the reasons for the grand total of inspections falling below that of August. However, the number of inspections on nuisances, particularly reinspections, shows a larger number than for the last month. A detailed summary of work performed is shown on page 15.

SCHOOL MEDICAL INSPECTION

By referring to page 16 a full detailed report of the work of this division can be found. This is one of the important features of Health Department Work, and the figures given are of interest.

BOARD ACTIONS

Page 15 contains a tabulated statement of the condemnations, vacations, abatements, etc., on nuisance complaints brought before the Board of Health during the month.

DIVISION OF LABORATORIES

The report of the Chemist appears in full on page 17 and should be consulted for information on this important branch of the department; 285 samples milk, 46 of meat, 45 of water were analyzed during the month, in addition to other work performed. See page 16 for report of Bacteriologist and page 16 for that of Toxicologist.

ARRESTS

See page 19 for full and detailed account of arrests made and character of ordinances violated, etc., etc. Forty arrests were made, 16 convictions were obtained, 11 cases dismissed, 12 pending. Fines to amount of \$320 were imposed.

WATER

Sanitary analysis was made of 45 samples of water collected from the following sources: Spring Valley Water Company, examined twice during the month, 22 samples; County Line Water Company, 4 samples; Golden Gate Park Water Supply, 8 samples; Miscellaneous sources, 8 samples.

Following are the tabulated analytical results obtained by the analysis of the above mentioned samples:

TABLE OF ANALYSES OF SAMPLES OF SPRING VALLEY WATER COMPANY'S WATERS TAKEN FROM THE CITY DISTRIBUTING RESERVOIRS AND THE LAKES MERCED (PARTS PER 1,000,000)

REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

. For Month of October, 1909

DEATHS

Five hundred and eighteen deaths were registered this month or 20 more than in October, 1908, and 11 less than in the same month of 1907. The mortality rate in 1908 per 1000 of population (425,000) was 14.04. This month it is 13.08 (population, 475,000). In 1907 it was 14.88. Following is a comparative table showing the deaths from some of the principal causes in the month of October for the past three years:

	1907	1908	1909
Total deaths from all causes	529	498	518
From			
Tuberculosis	56	54	65
Pneumonia, Lobar	24	23	34
Pneumonia, Broncho	13	14	18
Organic Heart diseases	63	54	74
Bright's disease	28	34	19
Diseases digestive system	54	45	54
Diseases digestive system Typhoid fever	13	10	6
Diphtheria	10	3	· ·
Scarlet fever	20	9	· · · · i
Whooping cough.		2	6
	15	26	17
Diseases Early Infancy	10	40	17
Deaths from violence	90	49	57

BIRTHS

Births registered total 591 as against 567 in October, 1908, and 658 in 1907. The birth rate in 1907 was 16.56 per thousand; in 1908 it was 15.96 (est. pop. 425,000); this month it is 14.88 (pop. 475,000). During the month just closed, about 125 certificates of birth were temporarily withheld from registration, pending a legal ruling as to enforcement of provisions of the law regulating the reporting of births within five days after they occur. This will account for the apparent falling off in the number registered.

CONTAGIOUS DISEASES

The following table will indicate cases of contagious diseases reported during month and figures showing comparisons for three years past:

	Oct. 1907	Oct. 1908	Oct.1909
Diphtheria	41	36	31
Scarlet fever	13	56	33
Smallpox	15	34	
Measles.	5	69	18
Whooping cough	2	37	36
Mumps Chicken-pox.	6	13 99	95

Pneumonia	20	12	50
Tuberculosis	69	131	132
Typhoid fever	63	40	42
Bubonic Plague	34	• • • •	
Amediasis.			ออ

DIVISION OF SANITARY INSPECTION

The Sanitary Inspector covering District 1 including the North Beach District and Chinese Quarter, and number 4, including the Mission and Potrero Districts, reports that District 1 contributed most of the Diphtheria and Scarlet Fever cases, namley, 13 of the former and 15 of the latter. District number 4 is credited with 2 cases of Diphtheria and 3 of Scarlet Fever. There were 12 cases

of Pertussis, 4 of Measles, 1 of Amebiasis and 5 of Typhoid reported in the combined districts.

In District number 2, covering the Western Addition, Sunset and Richmond Districts, the Sanitary Inspector reports 3 cases of Diphtheria, 2 cases of Pertussis and 5 of Typhoid Fever. For September Pertussis showed 16 cases, Mumps 5 cases, Typhoid 11 cases 4 cases of Amebiasis were also reported. A number of these cases are reported at the U. S. Marine Hospital, the victims of this disease for the most part being rated as American Seamen and nearly all came from different vessels, mostly those in the Coastwise trade, although the river and bay steamers have furnished their quota.

The Sanitary Inspector of District number 3, which includes South of Market Street, the Mission and to the County line, reports 12 cases of Diphtheria against 11 in September; 8 of Scarlatina against 13 in September; Measles, 11 in October 5, in September; Typhoid Fever 4 in October, 5 in September; Whooping Cough, 22 in October, 8 in September; Parotitis, 3 in October, 5 in September, and Varicella, 12 in October against 3 in September. With the approach of the autumnal season there has commenced as usual an increase in the number of Diphtheria, Scarlatina, Measles, Pertussis and Parotitis cases. It is not assumed that the season is alone responsible for this increase. Damp and inclement weather may favor bacterial invasion; it is more probable that the increase is due to seasonal insanitary surroundings, such as over-crowded, poorly ventilated dwellings, street-cars, school-rooms, etc., in which the organisms of disease find the heat, moisture and nutriment necessary for propagation. A slight outbreak of Scarlet Fever appeared in the Haight School which was checked by the disassociation of the pupils during Portola week, during which time the school building was renovated and painted. Most of the cases of lesser infectious diseases, such as Pertussis and Parotitis were reported by the Sanitary Inspectors who located them during the investigation of various sanitary conditions or while engaged in quarantine procedure.

DIVISION OF MARKET INSPECTION

Conditions in Butchertown, where the abattoirs are located, are being constantly improved, and are said to be better than has ever been known in its previous history, the buildings being nearly all new and modern in every respect. The condition of the butchershops, poultry and fish stores in the wholesale district and in the Chinese quarter from a sanitary point of view are reported as being in an excellent condition. The receiving stations along the water front are built on concrete bulkheads which are absolutely rat-proof, thus rendering it impossible for rodents to feed off the carcasses of animals. All meats furnished to the City and County Hospital and the Relief Home are inspected before delivery by the Inspectors in this division.

During the month this corps comdemned and destroyed 12,800 lbs. of fish, 7,955 lbs. beef; 170 calves; 63 sheep; 47 lambs; 24

hogs, 838 head of poultry.

DIVISION OF DAIRY & MILK INSPECTION

The dairies of San Mateo, Santa Clara and Alameda Counties have been inspected during this month and with few exceptions all of these show good progress in complying with the recommendations prescribed by this Department. Most of the improvements have been chiefly of a structural character and the perfection of dairy methods will naturally follow, which will accomplish the object of producing clean milk. Dairy Veterinarians recommend the Tuberculin testing of all dairy cattle and the destruction and isolation of all reacting animals. In this manner the milk supply to the city will be vastly improved. One hundred and fourteen dairies, located in outside counties, are at this time sending milk into the city and county of San Francisco. Two-thirds of this number now hold permits issued by this Department for shipping milk into the city, they having complied with all the requirements of the Board of Health. Five dairies within the limits of this county were inspected; likewise 700 cows thereon. Twenty-one three-gallon milk cans, being old and rusty, were condemned and destroyed; 243 samples of milk were taken for chemical and bacteriological analyses from the following sources; 52 from the ferry depot; 97 from milk wagons on the street; 9 from depots and dairies; 83 from hotels and restaurants, 2 from other sources. Thirty-four violators of the law were arrested and \$305 fines imposed upon offenders. At the present time there are 30 dairies in San Francisco and 122 dairy depots.

DIVISION OF PLUMBING INSPECTION

The Inspectors of this Division report that there is a six-foot concrete main sewer in course of construction in V street, south of the Park, which will drain the sewage from the houses in the Parkside District. At the present time the plumbing fixtures of these dwellings are discharging into cesspools. When proper sewer connections can be made, the sanitary conditions will be greatly improved. A main sewer has been placed in 16th Avenue south from Pt. Lobos and the main sewer in 19th Avenue is being continued from K street to P street. In the Mission and Potrero Districts many new sewers are being built, and storm sewers are also being freely installed. When the new sewers now in course of construction are completed, and many of these are now approaching the finishing stages, there will be a very marked improvement in the sanitary conditions of the districts affected. Many sewers are also being installed in the Ocean View and Sunnyside Districts, which is fast doing away with the cosspool unisance. Many nuisances of depressions in street pavements and consequent accumulations of stagnant water therein have been abated during the month.

SCHOOL MEDICAL INSPECTION

In this Division 15 schools, enrolling 7,875 pupils, have been visited during the month, a total of 275 visits being recorded. Four-teen children were excluded from school who were found suffering from different contagious diseases. Many treatments have been given and the report on vaccination under this heading, which appears on page 16, will prove of interest.

BOARD ACTIONS

During the month 47 new cases were brought before the Board and final action was taken on six cases carried over from previous months. Fifty insanitary premises were condemned during the month, and 44 nuisances were abated as follows:

By repair	
By demolition	11
By vacation	16

DIVISION OF LABORATORIES

The Chemist reports 314 analyses made during the month, of these 249 were of milk, 23 samples meat, 1 of butter and 11 samples of water. Of the milk samples submitted 72 were found below standard, 40 of which were sufficiently so as to warrant arrest. By referring to page 17 a complete detailed report of the work performed by this division will be found.

On page 16 will be found the report of the Bacteriologist and Toxicologist.

ARRESTS

Thirty-six arrests were made during the month of October, and \$245 fines were imposed on offenders arrested this month and \$80 on pending cases from previous months. On page 19 will be found a detailed report of the arrests made and the character of ordinances violated.

#### CHEMICAL LABORATORY

#### W. BEAVER, Chief Chemist

ase:

C. F. HOYT and R. A. JONES, Asst. Chemists

The work done in the Chemical Laboratory during the month of October consisted of the analysis of 249 samples of milk; 23 amples of meat; one sample of butter and 41 samples of water. The total number of all analyses was 314.

	K

Percentage below standard, 28.9.

Following are the names and addresses of those ordered arrested for violating the Milk Ordinance, with the deficiency in each

The sample of butter analyzed was found to be unadulterated. Technical analysis of one sample of water was made for the Relief Home for the Aged and Infirm.

WATER

Sanitary analysis was made of 40 samples of water collected from the following sources: Spring Valley Water Company examined twice during the month, 22 samples; County Line Water Company, 3 samples; Relief Home for the Aged and Infirm, 12 samples; miscellaneaous sources, 3 samples.

Following are the tabulated analytical results obtained by the analysis of the above mentioned samples:

## REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For Month of November, 1909

#### **DEATHS**

Five hundred and thirty-three deaths were registered this month, or fourteen more than in 1908 and seventeen more than in the same month of 1907. The mortality rate in 1908 per thousand of population (425,000) was 14.64; this month it is 13.44 (population 475,000). In 1907 it was 14.52.

The following is a comparative table showing the deaths from some of the principal causes in the month of November for the past

three years.

	1907	1908	1909
Total deaths from all causes	516	519	533
Tuberculosis	58	51	59
Pneumonia, Lobar	28	38	39
Pneumonia, Broncho	11	11	12
Organic Heart Disease	<b>7</b> 2	69	66
bright's Disease	30	40	34
Diseases Digestive System	47	45	45
Typhoid Fever	10	14	7
Diphtheria	10	4	4
Scarlet Fever		4	
Whooping Cough	1	1	2
Diseases Early Infancy	20	19	16
Deaths from violence.	38	41	56

#### **BIRTHS**

Births registered total 567 as against 654 in November, 1908 and 377 in November, 1907. The apparent discrepancy between the number registered in 1908 and 1909 is due to the fact that in the former year the result of the enforcement of the birth registration law began to show its effect and the consequence was a tremendous increase over the corresponding period of 1907, although within a few months following November, 1908, the registration assumed a normal condition while showing a large increase over previous years. The birth rate in November, 1907, was 10.64 per thousand; in 1908 it was 18.36 (estimated population 425,000). This month it is 14.28 (population 475,000).

#### **CONTAGIOUS DISEASES**

The following table will indicate cases of contagious diseases reported during the month and figures showing comparisons for three years past:

	1907	1908	1909
Diphtheria	45	56	37
Scarlet Fever	17	66	50
Smallpox	7	16	`4
Measles	10	213	$\overline{42}$
Whooping Cough	4	19	37
Mumps	ī	31	10
Chicken-pox.	5	63	55
Cerebro Spinal Meningitis	7	4	3
Pneumonia	27	18	56
Tuberculosis	62	94	104
Typhoid Fever	46	30	28
Bubonic Plague	29		20
Amebiasis.	*	*	· · · · i
*Not reportable at this time			

#### DIVISION OF SANITARY INSPECTION

The Sanitary Inspector covering District 1, which includes the North Beach District and Chinese Quarter, reports 13 cases Scarlet Fever and 11 of Diphtheria during the month. In District 4, embracing portion of the Mission and Potrero Districts, 4 cases of Scarlet Fever, and 4 of Diphtheria. The number of cases of Typhoid reported in the combined districts has diminished by 50% as compared with the month of October. One case of Smallpox was reported from the Potrero District and the case was removed to the Isolation Hospital. One case of Amebiasis was reported, which was probably not local in origin.

District 2, which covers the Western Addition, Sunset and Richmond Districts, shows an increase of Diphtheria cases from

3 in October to 11 in November; Scarlet Fever, 7 in October, 21 in November; Typhoid Fever, 11 in October, 13 in November. Varicella shows an increase of 21 cases in November against 4 cases in October. The increase in these cases may be accounted for owing to the variable weather conditions which have prevailed during the last month. One case of Smallpox was reported and the patient removed to the Isolation Hospital. One case of Leprosy in the person of a Korean, a recent arrival from Portland, Ore., was also discovered and the patient promptly removed to the Isolation Hospital.

District 3, including a portion of south of Market Street and the Mission and to the County Line, reports 11 cases of Diphtheria

against 12 in October; 12 cases Scarlet Fever against 8 in October; 33 cases of Measles against 11 in October; 23 cases of Varicella against 12 in October. Two cases of Smallpox also reported and patients removed to the Isolation Hospital. Varicella continues to show an increase over preceding months, probably owing to the fact that parents or physicians fail to report cases and children suffering from the malady or being in the family in which it exists are permitted to attend school and unless the teachers become cognizant of the conditions, an epidemic results. This character of cases occur in schools not covered by School Medical Inspection. In the Maud Booth Home, which is devoted to the care of homeless children, there were developed three cases of Scarlet Fever within a week, and every precaution has been taken against the further spread of infection.

#### DIVISION OF MARKET INSPECTION

The abattoirs in Butchertown continue to show good conditions and are constantly improving. The Inspector reports that animals slaughtered for food purposes are in a very healthy condition. The slaughtering beds and walls of abattoirs are scrubbed and hosed every evening, and all offal and animal matter is removed daily. All tanks and floors are disinfected and thoroughly cleansed.

The water front and Chinatown districts are reported to be in very good condition, as is also what is known as the wholesale district. Many of these are still housed in what is known as "temporary buildings" and these are kept in as good and cleanly condition as surroundings will permit.

#### DIVISION OF DAIRY & MILK INSPECTION

The dairies of San Joaquin, Contra Costa, San Mateo and Santa Clara Counties were inspected during the month, a total of 42 dairies and 15 dairy depots being covered. All of these dairies are showing good progress in improvement, and 31 of 39 that have previously been inspected are ready for or have received their permits from the Health Office. Some diseased animals are being found and especial attention is being given to excluding Tubercular cattle from the herds. Identification cards are now being filled out for each quarantined and condemned animal and will be filed in the Health Office for future reference. In cases where opposition may manifest itself on the part of the dairyman in disposing of diseased animals, steps will be taken to quarantine the milk of such dairies if any animals of this class are permitted to remain in the dairy.

The dairies of Marin, Sonoma, Napa and Solano Counties were re-inspected during the month. Good progress is being made

in complying with the recommendations of the Department, and the dairymen appear to be anxious to secure the advice of the Inspector with reference to the methods of construction or reconstruction of dairies and seem to be agreeable to plans suggested. From

the present outlook the sanitary production of milk is extremely favorable.

Ninety-seven milk depots within the City and County were inspected during the month; also 37 dairies handling 2624 cows were investigated; 24 cows that were found to be suffering from Tuberculosis were killed; 96 three-gallon milk cans were condemned as unfit for use, and 137 samples of milk were taken for chemical analysis, these samples being obtained from milk wagons, depots, ferries, hotels and restaurants.

The number of dairies at the present time outside of the county supplying milk to San Francisco total 115. Number of dairies in City 33. Number of dairy depots in City 125. The daily milk supply of the City comes from the following sources: From outside counties via Ferry Depot 11,500 gallons.

From outside counties via S. P. Co., 3d St. Depot, 6000 gallons.

From dairies within the City limits 6,300 gallons.

Total 23,800 gallons.

#### DIVISION OF PLUMBING INSPECTION

The Inspectors of this Division report that the work of construction and re-construction of the new main sewers throughout the City authorized under the late bond issue is progressing with rapidity. This character of work seems to be the most important that this division has to deal with as the greatest number of complaints of defective sewerage that are filed arise from the fact that the main sewers are at fault.

Much work is being done by the Side Sewer Department of the Board of Public Works, and the flushing gangs are kept busy cleaning out main sewers and corner cess-pools. The Channel Street sewer, which is the main outlet for the bulk of sewage from the most thickly populated portion of the City is now being re-constructed from 8th to 10th Streets. As this sewer was in a very bad condition and urgently in need of repair, when the work of re-construction is finished it will place the lower portion of the City in a better sanitary condition.

In the district north of Sutter and west of Powell there has been a great increase in the number of apartment houses under construction, particularly in the limits outside of the fire district. Properties that were formerly used for residence purposes are now

being cut up into lots and placed on the market for apartment houses.

#### DIVISION OF FOOD AND INDUSTRIAL INSPECTION

During this month especial attention has been paid to the conditions pertaining to the large department stores where ments, cooked and un-cooked, and other foods prepared for ready consumption are exposed for sale in the midst of numerous bargain counters where dry goods, hardware, crockery, toys, furs and many other articles are handled and exposed for sale. These stores are visited by thousands of persons, mostly women, during any one day, bringing with them the dust of the street and stirring up the dust from the floor with the sweep of their skirts and thereby causing the food materials mentioned to become covered with dust. Notices have been served on the firms given to this practice that they must provide glass cases for exposed foods.

During this month six restaurant keepers were arrested for keeping milk cans on their ranges, using them for the purpose of heating milk—this practice being in violation of the regulations of the Board of Health. Especial attention is being given to this

feature of the work with a view to compelling absolute discontinuance of this practice.

#### SCHOOL MEDICAL INSPECTION

A full report of the work of this Division will be found on page 16. A total of 432 visits were made and 15 schools, enrolling 7,875 pupils, were inspected. Forty-seven children were excluded on account of suffering from various diseases. Reference to the tabulated report of the work performed in this division will show some interesting figures.

#### **BOARD ACTIONS**

Thirty-two insanitary premises were brought before the Board and in five instances final action was taken on premises post poned from previous months. Twenty-seven insanitary premises were condemned during the month and 17 nuisances abated. For tabulated report of this work see page 15.

#### DIVISION OF LABORATORIES

The Chemist reports 319 analyses made during the month, 273 of these being milk, 42 water and 4 miscellaneous samples. The total number of milk samples found to be below standard was 57, nine of which sufficiently so as to warrant arrest. Page 17 contains a full detailed report of the work performed by this division which is of interest. Page 16 contains the report of the Bacteriologist and Toxicologist.

#### **ARRESTS**

Forty arrests were made during the month and \$375 fines imposed on November offenders and \$185 on pending cases from previous months. On page 19 will appear a complete record of these cases showing character of ordinances violated, and disposal of each case.

#### C. W. BEAVER, Chief Chemist

C. F. HOYT and R. A. JONES, Asst. Chemists

The work of the Chemical Laboratory during the month of November consisted of the analysis of 273 samples of milk, 1 sample of buttermilk, 1 sample of dried egg albumin, 1 sample of cream, 1 sample of vinegar and 42 samples of water. Total number of analyses, 319.

#### MILK

Samples taken from milk depots. Samples taken from shippers. Samples taken from restaurants. Samples submitted by public institutions.	137; below standard 7; below standard 102; below standard 22; below standard 2; below standard 3; below standard	2 4 17 0
	273; total number below standard	57
Percentage of samples below standard, 20.8.		
Number of samples sufficiently below standard to warrant a	rrest. 9.	

Following are the names and addresses of those arrested for violating the Milk Ordinance, with the deficiency in each case:

		DEFI	CIENCY	
NAME	BUSINESS	Milk	Solids	Added
			Not Fat	Substance
T. Prepoutse, 84 9th Street	The Constantinople Restaurant		0.42	Water
P. Malone, 1204 Howard Street	California Chop House	0.95		
T. H. Ward, 1202 Howard Street	St. Francis Restaurant	1.4	1.96	Water
T. Pernoll, 1797 Mission Street	Popular Lunch Room	1.1		
L. Stegmiller, 107 6th Street	The Baltimore Restaurant	0.9		
E. Scheibel, 1154 Folsom			0.73	Water
A. Kreutzer, 1990 Folsom Street			0.57	
G. Rabarin, 1604 Folsom Street			0.16	
J. Kennell, Visitacion Valley			0.10	
o. Promisor, Francisco Family		0.1		

#### COURT RECORD (MILK CASES)

Number of cases in Court	37	Number of convictions	29
Number of cases carried over	3	Number of dismissals	5
Total amount of fines	\$510	Average fine	

#### MISCELLANEOUS ANALYSIS

The samples of cream and buttermilk analyzed were found to be unadulterated. The sample of dried egg albumin was found to contain about three per cent. of cooked albumin and a small amount of egg yolk. The sample of vinegar, submitted by the City and County Hospital, was found to satisfy the requirements of the Federal and State Standards for pure apple vinegar.

#### WATER

Sanitary analyses were made of 42 samples of water collected from the following sources:
From the Lakes Merced and the City Distributing Reservoirs of the Spring Valley Water Company, examined twice during the month, 22 samples. From the properties of the County Line Water Company, 3 samples. From the Golden Gate Park Water Supply, 6 samples. From the properties of the Purity Spring Water Company, 9 samples. From miscellaneous sources, 2 samples.

Following are the tabulated analytical results obtained by the examination of the above mentioned samples:

# REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For Month of December, 1909

#### **DEATHS**

Five hundred and seventy-three deaths were registered this month, or forty-two more than in 1908 and sixty-six less than in the same month of 1907. The annual mortality rate in 1908 per thousand of population (425,000) was 14.76; this month it is 14.40 (population 475,000). In 1907 it was 17.88.

The following is a comparative table showing the deaths from some of the principal causes in the month of November for the past

three years.

	1907	1908	1909
Total deaths from all causes	636	528	570
Tuberculosis	68	60	65
Pneumonia, Lobar	52	43	28
Pneumonia, Broncho	14	18	18
Organic Heart Disease	78	56	85
Bright's Disease	31	29	28
Diseases Digestive System	53	53	41
Typhoid Fever	15	4	4
Diphtheria	6	5	6
Scarlet Fever	1	5	
Whooping Cough		2	5
Diseases Early Infancy	20	17	19
Deaths from violence	67	56	49

#### **BIRTHS**

Births registered total 548 as against 552 in December, 1908 and 455 in December, 1907. The annual birth rate in December, 1907, was 12.84 per thousand; in 1908 it was 15.48 (estimated population 425,000). This month it is 13.83 (population 475,000).

#### **CONTAGIOUS DISEASES**

The following table will indicate cases of contagious diseases reported during the month and figures showing comparisons for three years past:

	1907	1908	1909
Diphtheria	58	51	51
Scarlet Fever	8	61	50
Smallpox	38	19	6
Measles	13	241	55
Whooping Cough.		6	33
*Mumps	1	45	1
Chicken-pox.	29	60	57
Cerebro-spinal Meningitis	6	3	5
Pneumonia	45	29	45
Tuberculosis	66	103	136
Typhoid Fever	36	35	24
Bubonic Plague	27		

#### DIVISION OF SANITARY INSPECTION

In Sanitary District No. 1, including North Beach and the Chinese Quarter, 9 cases of Diphtheria were reported as against 11

for the month of November. 11 cases Scarlet Fever this month, 13 cases last month.

In District No. 4, including the Mission and Potrero Districts, a focus of infection of Diphtheria was discovered in the Burnett and Bay View Schools. The class-rooms were promptly disinfected and the Women Inspectors of Schools investigated cases of absent children and all precautions possible have been taken to prevent the further spread of infection. This district shows one case of Scarlet Fever for December as compared with 4 cases in the month of November. Typhoid Fever has diminished, there being only 1 case reported in each of the above-named districts.

District No. 2, including the Western Addition, Sunset and Richmond Districts, showed an increase of 4 Scarlet Fever cases over the preceding month, 25 cases being reported in December. There were 10 cases of Typhoid Fever reported, three less than ir the month of November. Varicella cases reported total 29, an increase of 8 over that of the preceding month. Many complaints o insanitary premises were filed during the month and were expeditiously handled.

District No. 3, including a portion of the south of Market Street and the Mission to the County Line, shows Diphtheria case

reported 16 in December as against 11 in November; Scarlet Fever, 12 in December—12 in November; Smallpox, 6 cases in December 2 in November: Typhoid Fever, 4 in December, 7 in November: Pertussis, 22 in December, 20 in November; Varicella, 21 in December, 23 in November. A threatened outbreak of Scarlatina in the Maude Booth Home was effectually prevented through the promp measures taken by this Department and the manner of handling the cases prevented what might have resulted in a serious condition Five cases developed among the 65 juvenile inmates, and when it is considered that these children were intimately associated and shut up by reason of quarantine and rainy weather, the low percentage of infection speaks well for the work of this Department Of the six smallpox cases discovered, definite history of contact was obtained in 5. Four of these patients had never been vaccinated Two, adults, were vaccinated more than 20 years ago.

### DIVISION OF MARKET INSPECTION

Conditions in Butchertown, where abattoirs are located, show good conditions and improvements are constantly being made that are bringing this district to a very high standard from a sanitary point of view. Regulations of this Department with reference to the cleaning, hosing and disinfection of slaughtering beds, walls of abattoirs and tank floors are rigidly observed and all con demned meats are promptly removed to the Reduction Works daily.

In the wholesale meat, poultry and fish markets conditions are very good, and meats in transit unloaded at wharves and railroad sheds are handled in a clean and sanitary manner.

#### DIVISION OF DAIRY AND MILK INSPECTION

The dairies of Santa Clara, Alameda, Marin, San Mateo and Contra Costa Counties have been re-inspected during this month, a total of S1 inspections being recorded during this period. Twelve cows were found to be suffering from Tuberculosis were condemned and destroyed. In some non-tested herds animals suspected of being tubercular were found, and in these cases the owners have agreed to dispose of these animals. In other cases some dairymen have of their own accord removed from the herds cows that were beginning to show symptoms of Tuberculosis, and have been destroyed without awaiting inspection by the representative of this Department. It is proposed to establish milk score cards to be used in branch depots, delicatessen stores, bakeries and other places where milk is sold and handled.

Within the city limits 54 dairies were inspected and also 127 dairy depots. 4,003 cows were inspected and 5 were placed under quarantine. Four were condemned and killed. 86 milk cans found to be unfit for further use were also condemned and destroyed.

273 samples of milk were taken for chemical analysis from the following sources:

	*	
Depots and Dairies		25
R. R. Depots and Wharves		175
Delicatessen Stores, Groceries, Bakeri	es, etc	9

A tabulated report of the work of this bureau will be found on page 13.

#### DIVISION OF PLUMBING INSPECTION

The Inspectors of this division report favorable progress in the construction of new main sewers and re-construction of old, defective ones. Many sewers are being installed in districts where the residents are by force of circumstances compelled to install cesspools, and it will be but a question of a short time when many of the complaints arising from this cause will be abated. Much street work is now being performed by the Board of Public Works, and complaints arising from broken pavements, depressions in gutters, etc., causing collection of stagnant pools, are rapidly being abated.

During the month 147 plans were submitted, representing 161 buildings. 41 permits were granted for repair work, and 212

new fixtures were installed in old buildings.

54,480 feet of cast-iron sewer, 20,890 feet of iron stone sewer and 520 curb traps were inspected during this month. A tabulated report of the work of this bureau will be found on page 15.

#### DIVISION OF FOOD AND INDUSTRIAL INSPECTION

In the Division of Food Inspection 646 inspections were made, covering fish markets, commission houses, delicatessen stores, fruit stores, groceries, hotels, restaurants and butcher shops. It has been noted that there have been fewer violations of the regulations of the Board of Health with reference to the heating of milk in the delivery cans, and it would appear that the orders of the Inspectors of this Department to discontinue this habit have been obeyed.

The Industrial Inspector covered 451 inspections, embracing 10 different occupations. 413 premises were found to be in a sanitary condition; 38 were not. Many of these establishments are located in what is known as temporary single wall structures, such as were erected after the disaster of 1906, and while it is a difficult matter to keep such buildings in a thoroughly sanitary condition,

much good work is being done by this Division in keeping these places up to a fair standard of cleanliness.

#### SCHOOL MEDICAL INSPECTION

A full report of the work of this Division appears on page 16.

A total of 373 visits were made and 19 schools, enrolling 10,546 pupils were inspected. 50 children were excluded on account of suffering from various diseases.

#### **BOARD ACTIONS**

Thirty insanitary premises were brought before the Board and in six cases final action was taken on cases postponed from other months. Thirty insanitary premises were condemned during the month and 31 nuisances abated. For full particulars see page 15.

#### DIVISION OF LABORATORIES

A full and tabulated report of the work performed by the Chemist appears on page 17. This report will prove of great interest as showing the work done by the department in its efforts to compel observance of the pure food law. On page 16 will be found the report of the Bacteriologist and Toxicologist.

#### **ARRESTS**

Nine arrests were made during this month and \$60 fines imposed on offenders. The record of arrests will be found on page 19 of this bulletin.

#### CHEMICAL LABORATORY

#### C. W. BEAVER, Chief Chemist

C. F. HOYT and R. A. JONES, Asst. Chemists

The work of the Chemical Laboratory for the month of December consisted of the analysis of 281 samples of milk, 31 samples of meat, 23 samples of condensed milk, 4 samples of urine, one sample of beer and 33 samples of water.

Total number of all analyses, 373.

S	amples taken from milk wagons	18
S	amples taken from milk depots	1
S	amples taken from shippers	19
S	amples taken from restaurants	7
S	amples taken from stores	4
S	amples taken from bakeries. 2; below standard	2
S	amples submitted by private individuals	1
S	amples submitted by public institutions	0
	<u>—</u>	—
	Total number of samples analyzed	52
P	Percentage below standard, 18,5.	

Number sufficiently below standard to warrant arrest, 10.

Following are the names and addresses of those dealers arrested for violation of the Milk Ordinance, with the deficiency in each case:

		DEFI	CIENCY

#### COURT RECORD (MILK CASES)

Number of Cases in Court	6	Number of Convictions	1
Number of Cases carried over			
Total Amount of Fines \$	310	Average Fine	\$10

#### MEAT

Number of samples analyzed (representing 19 dealers)	31
Number of samples found to contain chemical preservatives not allowed by law (representing 3 dealers)	4
Ordered arrested.	

Following are the names and addresses of those dealers arrested for violating the Meat Ordinance, with the adulteration in each case:

NAME	SUBSTANCE	ADULTERATION
C. F. Lander, 1545 Polk St., The Palace Market	Chopped Pork	Sulphites
C. F. Lander, 1545 Polk St., The Palace Market		Sulphites
Chas. Cazaux, 623 Larkin St., Lansdale Meat Market	Hamburg Steak	Sulphites
A. Julius, 42 Eddy St., Meat Market	Hamburg Steak	Sulphites

#### COURT RECORD (MEAT CASES)

Number of Cases in Court	5	Number of Convictions	2
Number of Cases carried over	0	Number of Dismissals	3
Total amount of Fines	\$50	Average Finc	825

#### MISCELLANEOUS ANALYSES

The 23 samples of condensed milk analyzed represented all of the brands found on this market. Nineteen of the samples were unsweetened condensed milk and with 1 exception were found to contain less than the required 7.7% of milk fat. Four samples were of the sweetened variety of condensed milk, two samples of which were found to be lacking to a very small extent in milk fat. The work done on these samples is merely preliminary; further investigation of this food product will be immediately undertaken.

Determinations of total nitrogen and uric acid were made on 4 samples of urine. A sample of beer analyzed was found to be unadulterated.

#### WATER

Sanitary analyses were made of 33 samples of water submitted from the following sources: From the properties of the Spring Valley Water Company, examined twice during the month, 22 samples. From the Municipal Water Company, 3 samples. From the Golden Gate Park Water Supply, 4 samples. From miscellaneous sources, 4 samples. Following are the tabulated analytical results of the above-mentioned examinations:

# CHEMICAL LABORATORY-Cont'd

TABLE OF ANALYSES OF SAMPLES OF SPRING VALLEY WATER COMPANY'S WATERS TAKEN FROM THE CITY DISTRI-BUTING RESERVOIRS AND THE LAKES MERCED

### REPORT OF HEALTH OFFICER, R. G. BRODRICK, M. D.

For Month of January, 1910

2

#### **DEATHS**

Six hundred and one deaths were registered this month, or forty-eight more than in 1909 and twenty-eight less than in the same month of 1908. The annual mortality rate in 1909 per thousand of population (475,000) was 13.92; this month it is 15. (population 475,000). In 1908 it was 15.48 (population 425,000).

The following is a comparative table showing the deaths from some of the principal causes in the month of January for the pa

three years.

	1908	1909	1910
Total deaths from all causes	629	553	601
Tuberculosis	85	64	83
Pneumonia, Lobar	58	32	51
Pneumonia, Broncho	38	18	17
Organic Heart Disease	80	64	85
Bright's Disease	42	42	29
Diseases Digestive System	42	37	30
Typhoid Fever	7	3	1
Diphtheria	10	5	2
Scarlet Fever		<b>2</b>	
Whooping Cough		4	1
Diseases Early Infancy.	17	30	22
Old Age	18	10	14
Deaths from violence	<b>5</b> 3	46	68

#### **BIRTHS**

Births registered total 511 as against 579 in January, 1909 and 443 in December, 1908. The annual birth rate in December, 1908, was 12.48 per thousand; in 1909 it was 14.52 (estimated population 425,000). This month it is 12.90 (population 475,000).

#### CONTAGIOUS DISEASES

The following table will indicate cases of contagious diseases reported during the month and figures showing comparisons three years past:

	1908	1909	1910
Diphtheria	<del></del>	53	 55
Scarlet Fever	17	47	59
Smallpox	38	4	4
Measles	21	272	81
Whooping Cough	2	37	58
Mumps	3	42	2
Chicken-pox	46	70	65
Cerebro-spinal Meningitis	8	2	
Pneumonia	49	22	78
Tuberculosis	83	121	170
Typhoid Fever	21	13	13
Bubonic Plague	4		

#### DIVISION OF SANITARY INSPECTION

In Sanitary District No. 1 (North Beach and Chinese Quarter) and District No. 4 (portion of Mission and Potrero Districts) t following tables will show the comparison of contagious diseases reported for the present month as compared with the preceding mont

	J	Dec. 1909	Jan. 1910
Diphtheria		25	24
Scarlet Fever.		13	20
Measles			25
Whooping Cough.		6	22
Chickenpox		7	11
Pneumonia			26
Typhoid Feyer		1	7

One case of Smallpox was discovered during the month, the patient having gone to Sonora, Cal., where a number of cases are sa to have existed. After a brief stay he returned to this city via Stockton and San Jose, remaining some time in each place. The case w removed to the Isolation Hospital and the premises where patient roomed were thoroughly fumigated. The Health Officers of the va ous cities at which he had stopped while en route to this city were notified of the circumstances.

In District No. 2 (Western Addition, Sunset and Richmond) the following table will show the difference between cases report

this month as against the preceding month.

	Dec. 1909	Jan. 1910
Diphtheria	10	15
Scarlet Fever	25	27
Measles	9	35
Whooping Cough	5	12
Chickenpox	29	23
Mumps		1
Typhoid Fever	10	8

District No. 3 (portion South of Market and the Mission to the County Line) shows cases reported during month of January compared to December, as follows:

	Dec. 1909	Jan. 1910
Diphtheria	. 16	13 ·
Scarlet Fever	. 12	13
Smallpox		2
Typhoid Fever	. 4	2

The source of infection in the Typhoid Fever cases was not accurately determined, though found to be local in origin. The Smallpox cases reported occurred in children who had never been vaccinated. In one of these cases removal of patient was refused and a police quarantine was therewith enforced. One case was removed to Isolation Hospital and the premises where patient had lived thoroughly fumigated.

#### DIVISION OF MARKET INSPECTION

In Butchertown, where all the slaughtering within the City limits is conducted, is reported as being in a very good condition Although there are no sewers in this District all refuse is removed daily to the fertilizing works, and the practice of allowing refuse to run into the waters of the Bay has been entirely discontinued. Particular attention is paid to the daily cleaning of slaughtering

The general condition of the meat, poultry and fish markets throughout the city is reported as being good, and outside markets on the Mission Road, Glen Park, Ocean View and abattoirs in the vicinity of Colma, San Mateo Co., are said to be very much improved. The meat and fish markets in the Chinese quarters are in sanitary condition and the character of merchandise handled is of good quality

and found to be in good condition.

Calves that are shipped into this City from outside points are reported to be better in quality than were formerly sent in. The shipping of dressed beeves to the City markets from the interior districts has fallen off to the extent that very little is now being shipped in, as the inspection has proven to be too rigid.

#### DIVISION OF DAIRY & MILK INSPECTION

44 dairies and 12 dairy depots were inspected by the Chief Dairy Inspector during this month. These inspections included some dairies in Marin County, most of which were found to be in good condition, and all dairies in the counties of Napa, Sonoma and Solano were inspected. In these counties some owners have been obliged to entirely reconstruct cow stables, etc., in order to conform with the regulations of this Board. This work, however, is said to have been done with a good spirit and has progressed very satisfactorily. The dairies of Santa Clara, Alameda, Marin and Solano counties have also been inspected by the Asst. Dairy Veterinarian, and were found to be in good condition.

Within the City limits 46 dairies were inspected and also 101 dairy depots. 2677 cows were inspected, and 5 placed under quarantine. 4 were condemned and killed. 37 milk cans found to be unfit for further use also condemned and destroyed. 279 samples

of milk taken for chemical analysis.

#### DIVISION OF PLUMBING INSPECTION

The Inspectors of this Division report that by the construction of many new main sewers complaints of insanitary cesspools have been abated. This appears to be a very satisfactory solution of a problem which has caused considerable vexation to this division. Wherever new sewers are installed in almost every instance the property owners show a commendable desire to at once have the plumbing fixtures in their various premises connected to the main sewer.

During the month 117 plans submitted, representing 132 buildings. 46 permits granted for repair work and 196 new fixtures

installed in old buildings. 52,300 ft. of cast iron sewer, 18,160 ft. iron stone sewer and 401 curb traps were inspected.

#### DIVISION OF FOOD & INDUSTRIAL INSPECTION

In the Division of Food Inspection 333 inspections were made, covering groceries, restaurants, butcher shops, delicatessen, fruit

stores, etc. A general inspection of warehouses where canned goods are placed in storage is about to be inaugurated.

The Industrial Inspector has devoted much time to investigation of scavenger wagons, and as a result the enforcement of the regulations with regard to construction of these vehicles is being properly enforced. Orders have been issued to compel all scavengers to obtain a certificate from this office to the effect that their wagons are constructed in accordance with the regulations of the Board of Health before a license to conduct same can be issued by the Tax Collector.

#### SCHOOL MEDICAL INSPECTION

A full report of the work of this division appears on page 16. A total of 223 school visits and 234 home visits were made. 19 schools, enrolling 10,555 pupils, were inspected. 50 children were excluded on account of suffering from various diseases and 15 were also excluded on account of failure to comply with the State Vaccination Law.

#### **BOARD ACTIONS**

14 insanitary premises were brought before the Board, and in 5 cases final action was taken on cases postpoued from other months. 16 insanitary premises were condemned during the month and 18 nuisances abated.

For full particulars see page 15.

#### DIVISION OF LABORATORIES

A full tabulated report of the Chemical Division appears on pages 17-18. On page 16 the report of the Bacteriologist and Toxicologist is shown.

#### ARRESTS

23 arrests made during month and \$170.00 fines imposed on offenders. A record of arrests will be found on page 19 of this Bulletin.

#### MEAT

Number of samples analyzed (representing 17 dealers)	20
Number containing preservatives not allowed by law (representing 4 dealers)	5
Recommended for arrest.	1

Following are the names and addresses of those dealers arrested for violating the Meat Ordinance, with the adulteration in each

NAME AND ADDRESS	BUSINESS	SUBSTANCE ADU	UTERATION
J. Marzen, 1815 Market Street	Atlantic Market	Hamburg	Sulphites
C. Ford, 3179 16th Street		Hamburg	Sulphites
C. Ford, 3179 16th Street		Pork Sausage	Sulphites
F. Winters, 2973 16th Street		Hamburg	Sulphites
T. McKeon, 1171 Folsom Street	McKeon's Market	Hamburg	Sulphites

#### WATER

Sanitary analyses were made of 34 samples of water submitted from the following sources: From the properties of the Spring alley Water Company, examined bi-monthly, 22 samples. From the Municipal Water Company, 3 samples. From the Golden Gate Park Water Supply, 3 samples. From miscellaneous sources, 6 samples.

Following are the tabulated analytical results of the examination of the samples from the properties of the Spring Valley Water

company, the Municipal Water Company and the Golden Gate Park Water Supply.

#### CHEMICAL LABORATORY

#### W. BEAVER, Chief Chemist

C. F. HOYT and R. A. JONES, Asst. Chemists

The work of the Chemical Laboratory for the month of February consisted of the analysis of 172 samples of milk, 43 samples meat and Meat brine, 8 samples of condensed milk, 6 samples of color paste, 1 sample of solution of potassium iodide, 1 sample of sol, and 20 samples of water. Total number of all analyses, 251.

# COURT RECORD (MILK CASES)

The following is the court record of samples analyzed during the month of January.

Cases in Court	23	Dismissals	10
Cases carried over	1	Total Fines	\$170.00
Convictions	12	Average Fine	\$ 14.17

#### **MEAT**

Number of samples of meat analyzed	23
Number of samples of meat brine analyzed.	20
Number of samples found to be adulterated	0

#### COURT RECORD (MEAT CASES)

The following is the Court record of samples analyzed during the month of January.

Cases in Court. Cases carried over.		Dismissals Total Fines	\$ 25.00
Convictions	1	Average Fine	25.00

#### **MISCELLANEOUS**

Five of the eight samples of condensed milk analyzed were found to be slightly below standard. The six samples of color pastes were found to be made from coal tar colors. The solution of potassium iodide was examined for per centage of potassium iodide. The lysol was merely identified.

#### WATER .

Sanitary analyses were made of 20 samples of water submitted as follows:

From the properties of the Golden Valley Water Company, 11 samples; from the Municipal Water Company, 3 samples; from the Golden Gate Park Water supply, 3 samples; from miscellaneous sources, 3 samples.

Following are the tabulated analytical results of the examination of the samples from the properties of the Spring Valley Water Company, the Municipal Water Company and the Golden Gate Park Water Supply.

#### CHEMICAL LABORATORY—Cont'd

# REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

For Month of April, 1910

#### DEATHS ·

Five hundred and thirty-eight deaths were registered this month, or twenty-five more than in April, 1909, and sixty-five more than in the same month of 1908. The annual mortality rate in 1909 per thousand of population (475,000) was 13.51; this month it is 13.56 (population 475,000). In 1908 it was 13.32 (population 425,000).

The following is a comparative table showing the deaths from some of the principal causes in the month of April for the past three

vears:

	1908	1909	1910
Total deaths from all causesFrom	473	513	538
Tuberculosis	57	67	81
Pneumonia, Lobar	23	31	30
Pneumonia, Broncho	11	12	14
Organic Heart Disease	53	72	84
Bright's Disease	33	27	32
Diseases Digestive System	41	36	41
Typhoid Fever	3 -		6
Diphtheria	12	8	3
Scarlet Fever			
Whooping Cough	• • • •	5	3
Diseases Early Infancy	18	- 16	7
Old Age	5	14	14
Deaths from violence	47	56	55

#### **BIRTHS**

Births registered total 532 as against 511 in April, 1909 and 366 in April, 1908. The annual birth rate in April, 1908, was 10.33 per thousand; in 1909 it was 12.84 (estimated population 475,000). This month it is 13.44 (population 475,000).

#### **CONTAGIOUS DISEASES**

The following table will indicate the number of principal cases of contagious diseases reported during this month and comparisons are also made for the month of April for three years past:

	1908	1909	1910
Diphtheria	82	69	60
Scarlet Fever.	33	51	36
Smallpox	38	1	5
Measles	167	204	199
Whooping Cough.	4	50	31
Mumps	14	60	18
Chicken Pox	29	42	72
Pneumonia	18	42	43
Tuberculosis:	57	157	144
Typhoid Fever	9	11	10

From the above table it will be seen that there is a diminution in the number of cases of diphtheria, scarlet fever, and smallpox reported as compared to the same month in previous years. The number of cases of measles, whooping cough, chicken pox, and pneumonia reported during this month as compared to same period in the two years previous is no indication of any marked increase of cases for the reason that at the present time the law with reference to the reporting of contagious diseases is being very rigidly enforced, and as a consequence the last mentioned diseases apparently show an increase which is explained by the foregoing statement.

#### DIVISION OF SANITARY INSPECTION

In Sanitary District No. 1, which includes North Beach and the Chinese quarter, the following tables will show the number of contagious diseases reported for the current month as compared with the preceding month:

	19	110
	March	April
Diphtheria	. 17	9
Scarlet Fever	. 3	7
Smallpox	. 2	3
Measles	. 67	39
Whooping Cough	. 8	4
Chicken Pox	. 16	3
Pneumonia	. 12	10
Typhoid Fever	. 2	6

The above is a very favorable showing, and no doubt the falling off in the number of cases of these diseases can properly be attributed to the rigid inspection maintained by the School Medical Inspection corps.

In District No. 2, embracing the Western Addition, Sunset and Richmond Districts, reported cases in the two months show as follows:

•	March	April
Diphtheria	19	18
Scarlet Fever	17	14
Smallpox		1
Measles	75	115
Whooping Cough	20	6
Chicken Pox	65	20
Pneumonia	15	15
Typhoid Fever	14	5

District No. 3, comprising a portion of south of Market Street and the Mission to the County line, shows the following cases reported:

	19	910
	March	April
Diphtheria		26
Scarlet Fever		14
Smallpox		::
Measles		35
Whooping Cough. Chieken Pox.		13
Pneumonia		10
Typhoid Fever		3

District No. 4, including the lower portion of South of Market and the Potrero District, shows cases as follows:

	19	910
	Mareh	April
Diphtheria	0	7
Scarlet Fever		1
Smallpox.		i
Measles		10
Whooping Cough		8
Chieken Pox Pneumonia		22
Pheumoria	. 10	0

The above tables will prove interesting as they indicate very clearly the fluctuation of these diseases. It is not always easy to determine the exact cause of this rise and fall as the foci of infection can not always be definitely located.

SCHOOL MEDICAL INSPECTION has to a great degree helped to stamp out the spread of this character of diseases, but owing to the fact that there are but a limited number of inspectors in the field, and but a very small proportion of the schools in operation are being covered by such inspection, the very best results cannot always be obtained.

#### DIVISION OF DAIRY AND MILK INSPECTION

During this month three hundred and thirty-three samples of milk were taken by the inspectors of this Department—one hundred and forty from the Ferry Depot, foot of Market Street and the Railroad Depot at Third and Townsend Streets, and from various other sources, such as delivery wagons (126); dairy depots, delicatessen stores, bakeries, groceries, etc., (67). Of this number, twenty-three samples were found to be below the state standard and city ordinances. The majority of these cases were those of "skimmed milk," and only three or four cases were those of diluting with water. Twenty-three arrests were made and in every instance a conviction was obtained. Four hundred and fifty dollars in fines was imposed upon offenders, the minimum fine being ten dollars and the maximum fifty. It is suggested that vigorous action be taken against shippers as they are the class who should be particularly looked after. Most of the arrests made as indicated above, are the results of analyses made from the samples taken at the Ferry Depot. Thirty-eight inspections were made of dairies within the city limits and fifty of dairies in other counties. One hundred and thirteen dairy depots were also inspected. Eight thousand one hundred and fifty six cows were inspected and thirteen were placed under quarantine; three were condemned and killed. Eighty-six milk cans were condemned as being unfit for further use.

#### DIVISION OF SCHOOL MEDICAL INSPECTION

During the month, nineteen schools enrolling ten thousand nine hundred and forty-five pupils were inspected and a total of five hundred and eighty-three school and home visits were made in connection with this work. A tabulated report of the work performed by this division is shown on page 17. The present Medical Inspector of Schools since March 1st, the date on which he took up this work, has personally examined eleven hundred and twenty-two children. It has been found that in the Italian quarter, a large number of children between the ages of seven and fourteen years are suffering from heart trouble. They are, as a rule, poorly nourished children, and the fault seems to be in most cases that they do not receive the proper attention at home. It has been suggested that if a start could be made with the home it would then be easy to reach all the children in the school and such a plan would mean a great deal in the fulfillment of this important work. The women inspectors of schools are all doing good work but they are too few in number. Four of these inspectors cover nineteen schools, while there are at the present time eighty-five schools in active operation, and as a consequence more inspectors should be provided to cover all the schools. The vaccination of school children has been given much attention and good results have been obtained. It has been found that in some cases practicing physicians have been too liberal in issuing certificates of successful vaccination when in numerous instances such has not been the case.

In connection with the work of school medical inspection, a Dental Inspector of School children was appointed during the month of March, 1910, and during the month of April six hundred children had been examined, and it was found that about ninety per cent of this number required dental treatment. In many instances the parents have not the means to have this work done, and the establishment of free clinics for dental treatment of children whose parents cannot afford to pay for them is strongly recommended.

### DIVISION OF TRUCK GARDEN INSPECTION

During the month of March, a new position was created by the Board of Health, under the caption of "Inspector of Truck Gardens" and the result obtained during the month of April indicates that this appointment was a very wise and necessary one. The report of this inspector, appearing on page 15 of this Bulletin, will show some interesting figures. Four samples of vegetables taken from various gardens and submitted to the Bacteriologist on examination showed the presence of amoebae, and three samples of water used by these gardeners in irrigating and spraying their vegetables were also taken and bacteriologically examined, with the same results, namely, amoebae present in all samples. The Bacteriologist of the Department has stated that baccili coli communis has been found in large quantities in the samples of water taken from these sources. The presence of these micro-organisms is not difficult to explain for the reason that the water used in the irrigation of these lands and the sprinkling of vegetables is in large part taken from Islais Creek, which receives the discharge from many sewers in the Mission and outlying districts. In some instances wells have been sunk at a point too close to the waters of the creek and as a consequence contamination follows. Some arrests have been made in an effort to enforce the provisions of the ordinance preventing the use of this water for irrigating purposes, and the result of these cases is still in doubt. I have been advised, however, that certain riparian rights which these truck gardeners enjoy, owing to their close proximity to this Creek, presents an obstacle which may make the enforcement of this regulation somewhat doubtful. However, this very important

phase of the work of this Department is practically in its infancy, and further experience will no doubt unfold some plan for regulating this feature, which, if neglected, would become a serious menace to the health of the inhabitants of the city.

#### DIVISION OF GARBAGE INSPECTION

In the month of March an Inspector was appointed by the Department whose special duty it is to attend to the important problem of garbage disposal. A reference to the report of this inspector which is contained on page 15, will indicate the character of the work which is being performed in this Division. This work, which is considered of the utmost importance, in so far as it bears on the problem of preventing an increase in the rat population, was formerly carried on by Inspectors under the U. S. P. H. and M. H. S., and when these inspectors were withdrawn from the field, it was deemed necessary to carry out this part of our work along the same lines as those employed in the Federal service. The wisdom of this action will be made apparent by referring to the report of this division and will indicate that good results are being obtained in the carrying on of this work.

#### **BOARD ACTIONS**

On page sixteen will be found a summary of Board actions on insanitary premises which will prove to be of interest. The disposal of "refugee shacks," which are a heritage from the disaster of April 18, 1906, is a problem that has been put squarely before the Board of Health on account of the withdrawal of the co-operation of the Relief and Red Cross Funds, Inc., whose affairs are being rapidly drawn to a close. An ordinance which was designed to operate in the direction of the removal of all "temporary" buildings by May 1st, 1910, was in the wisdom of the Board of Supervisors nullified by their action in extending the time for one year, or to May 1911. This presents to the Board of Health the proposition of maintaining a sanitary supervision over all buildings of this character and it has been found necessary in order to properly carry on this work to place ten additional inspectors in the field, paid for from the funds of the

been found necessary in order to properly carry on this work to place ten additional inspectors in the field, paid for from the funds of the Health Department and directly under the supervision of A. A. Surgeon, George M. Converse, who is the sole remaining field inspector out of fourteen in the field from the plague outbreak in 1907. Many premises are taken up for condemnation proceedings and an immense amount of work in the direction of permanent rat proofing has been accomplished by this means. There is still a great amount of work to be performed in this direction and while in many instances honest and intelligent co-operation is rendered by property owners yet there are quite a number who have refused to comply with the requirements of this Board and by Court proceedings in the shape of injunctions and restraining orders, have tied the hands of this Department.

#### **DIVISION OF LABORATORIES**

On page 18 will be found a full tabulated report of the work of the Chemical laboratory and as it is quite voluminous in its character no special comment can be made in this report. The report of the Bacteriologist appears on page 17, and a reference to same will prove of interest.

#### RECORD OF ARRESTS

Attention is directed to page 19, whereon appears a full and complete record of arrests made for violation of the various health laws. This report is tabulated in an extensive form and contains detailed information as to the enforcement of the health ordinances.

### REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

For Month of May, 1910

#### **DEATHS**

Five hundred and thirty-four deaths were registered this month, or one more than in May, 1909, and eight less than in the sam month of 1908. The annual mortality rate in 1909 per thousand of population (475,000 was 13.51; this month it is the same as i 1909, (population 475,000). In 1908 it was 13.30 (population 425,000).

The following is a comparative table showing the deaths from some of the principal causes in the month of May for the past thre

years:

	1908	1909	1910
Total deaths from all causes	542	535	534
Tuberculosis	82	65	52
Pneumonia, Lobar	36	34	32
Pneumonia, Broncho	14	11	18
Organic Heart Disease Bright's Disease	63	78	72
Bright's Disease.	25	24	33
Diseases Digestive System	29	26 .	42
Typhoid Fever	7	<b>[4</b>	<b>[</b> 5
Diphtheria	. 2	<b>7</b> 5	, 5
Scarlet Fever	1	1	! 2
Whooping Cough	4	4	7
Diseases Early Infancy	. 24	22	21
Old Age.	9	19	₹5
Deaths from violence	61.	52	44

#### **BIRTHS**

Births registered total 584 as against 526 in May, 1909, and 641 the corresponding month of 1908. The annual birth rate in May 1908, was 18.00 per thousand (estimated population 425,000); in 1909 it was 13.20 (estimated population 475,000). This month is 14.74 (population 475,000). The figures showing for 1908 are far in excess of those of the other two years. This is not an indicatio of any falling off in the number of births occurring in the city in the various years, the month of May, 1908, marking the date when the crusade was begun to compel all physicians to report the births occurring in their practice. This movement gave an artificial stimulus as it were, to the birth record, but the figures of 1909-10 will show the normal birth registration.

#### **CONTAGIOUS DISEASES**

The following table will indicate the number of principal cases of contagious diseases reported during this month, and comparison are also made for the month of May for three years past:

	1908	1909	1910
Diphtheria	59	66	43
Scarlet Fever.	29	50	50
Smallpox	29	7	2
Measles.	191	192	171
Whooping Cough	5	70	61
Mumps	5	59	23
Chicken Pox	28	29	44
Pneumonia	26	40	59
Tuberculosis	02	110	199
Typhoid Fever.	19	15	21
I V DILOIG T C V CF	14	19	21

Notwithstanding the fact that reports have been circulated to the effect that typhoid fever is quite prevalent in this city at the present time, an investigation by this department reveals the fact that there is no evidence to corroborate these statements.

#### DIVISION OF SANITARY INSPECTION

In Sanitary District No. 1, which includes North Beach and the Chinese Quarter, the following tables will show the number contagious diseases reported for the current month as compared with the preceding month:

		910
	April	May
Diphtheria		9
Scarlet Fever	7	10
Smallpox	3	
Measles	39	41
Whooping Cough		
Whicken Pox	3	6
Pneumonia	10	21
Typhoid Fever	6	9.

It will be noted that there is but a slight increase in the number of these diseases as compared with the previous month. Paticular attention is called to the figures given on smallpox, three cases having occurred in April and no cases whatever being reported during the month of Max.

In District No. 2, embracing the Western Addition, Sunset and Richmond Districts, reported cases in the two months show

follows:

	April	May
Diphtheria	18	9
Scarlet FeverSmallpox.		.20
Measles		70
Whooping Cough		40
Chicken Pox Pneumonia		15
Typhoid Fever		10

1910

A comparison of these figures will show a marked diminution in the number of cases of diphtheria, measles and chicken pox. Scarlet Fever shows an increase of six, whooping cough an increase of thirty-four, typhoid fever an increase of five over the reported cases of the previous month. This condition is no doubt attributable to the onset of the hot weather which prevails at this season of

District No. 3, which comprises the upper portion of the south of Market Street, part of the Mission District and also the Mission

to the County Line, gives the following figures:

	19	910
	April	May
Diphtheria	26	14
Scarlet Fever		19
Smallpox.		1
Measles		55
Whooping Cough.		12
Chieken Pox	~ .	19
Pneumonia		12
Typhoid Fever	0	Э

In this District the cases of diphtheria show a marked decline. Scarlet Fever, pneumonia and typhoid fever a slight increase. Measles shows a decided increase, due no doubt, to the practice of parents endeavoring to treat this disease by home-made methods, as in many instances it is found that physicians are not called upon to treat this disease and parents insist on permitting children to attend school without reporting the circumstance, and in this way the disease is indiscriminately disseminated.

In District No. 4, including the lower portion of south of Market Street and the Potrero District, cases were reported as follows:

		1910
	April	May
Diphtheria		
Scarlet Fever		
Smallpox		1
Measles		5
Whooping Cough. Chicken Pox		0
Pneumonia		11
Typhoid Fever	_	2

In this District measles, whooping cough and chicken pox show a perceptible falling off, while diphtheria and scarlet fever show but a very slight increase. In the investigation by the sanitary inspectors of all cases of contagious diseases an effort is made to determine as far as possible the source of infection, and in many instances it has been discovered that the neglect of parents in not giving

proper attention to children is responsible for the spread of the minor contagious diseases.

Districts 1, 3 and 4, in the foregoing tables include the territory embracing all of the 19 schools covered by school medical inspection, and the majority of the cases reported to the sanitary inspectors for investigation are reported by the women inspectors of schools, and were it not for this plan of inspection and exclusion from school there is little doubt but that the number of cases would be largely increased. These Districts hold a large population, and the North Beach District, which is a part of No. 1, embraces nearly all of the Italian population. Districts No. 3 and 4 also has a large number of children belonging to families in ordinary circumstances, and the reports of the School Medical Inspectors would tend to bear out the assertion that if these children were to receive proper attention at home it is very likely that there would be fewer cases of contagious diseases.

#### DIVISION OF DAIRY AND MILK INSPECTION

During this month sixty-six dairies in counties outside of San Francisco were inspected, and sixty within the city limits. Seventy dairy depots within the City and County were also covered; 10,281 cows were inspected; 10 were placed in quarantine and 3 condemned and killed. Five horses on various dairies found afflicted with glanders were also destroyed. Eighty-seven milk cans were condemned as being unfit for use and fourteen samples of water used in dairies were taken for chemical analysis; 361 samples of milk were taken for chemical analysis; 102 of these were from milk wagons, 257 from Railroad Depots and Wharves, and 2 from Dairy Depots. Of this number 102 were found to be below the state standard and city ordinance, 50 sufficiently below to warrant arrest. Fifty arrests were made and fines to the amount of \$310,00 were imposed upon offenders. A reference to the report of the Chemist, which will be found on page 18 will prove of much interest, as it contains a tabulated report of the result of the chemical analyses of these samples.

### DIVISION OF FOOD AND MARKET INSPECTION

During the month the food inspectors made 208 inspections covering commission houses, fruit stores, hotels and restaurants, groceries, butcher shops. One thousand eight hundred and sixteen packages of canned and bottled goods were condemned and sent to the Sanitary Reduction Works; 29 samples of food stuffs were taken for chemical analysis and 9 complaints of insanitary premises were abated.

The five market inspectors seized and condemned 11,000 lbs. of fish, 13,810 lbs. of beef, 148 calves, 15 sheep, 20 lambs, 22 hogs,

858 chickens and 48 rabbits.

These inspectors report that conditions in Butchertown, where the abattoirs are located, are constantly improving and the adoption of measures tending toward better sanitary conditions are being generally followed out. All walls, floors, etc., and slaughtering beds are hosed and cleaned each day, and all animal refuse is promptly removed to the Sanitary Reduction Works. The practice of dumping offal into the waters of the bay has been entirely discontinued. In January, 1910, the Board of Supervisors adopted an ordinance, to become effective July 1st, 1910, regulating the inspection of meat and meat products. Strong protests have been filed by the allied butchers trades against the adoption of this ordinance, and the Board of Health, after due investigation, has recommended to the Board of Supervisors the repeal of this ordinance before it becomes effective, on the ground that the provisions of same cannot be properly enforced with the limited number of inspectors now at the command of this Department. United States Government inspection obtains in the larger killing establishments, while local inspection covers the greater number of the smaller concerns. The Board of Supervisors will be asked to make provision for better regulations covering the inspection of meat, than is now in existence.

#### DIVISION OF SCHOOL MEDICAL INSPECTION

During the month 19 schools enrolling 10,845 pupils were inspected, and a total of 502 visits were made, 200 of these being to schools and 299 to homes. One hundred and twenty-four children were excluded on account of various contagious diseases, including 3 cases of diphtheria, 4 of scarlet fever, 16 of measles, 15 of chickenpox, 3 of whooping cough; the remainder found to be suffering from

contagious skin disease, tonsilitis, conjunctivitis, etc.; 25 contacts were also excluded; 744 treatments were administered for pediculosis; 41 cases of ringworm and 188 cases of impetigo were also treated. 588 children were found to be unsuccessfully vaccinated; 6 of these had never submitted to this operation; 33 children were vaccinated during the month and 6 were excluded on account of vaccination; 935 children were personally examined by the Medical Inspector.

#### DIVISION OF TRUCK GARDEN INSPECTION

In this Division 15 market inspections were made and 177 wagons inspected; 12 insanitary gardens were inspected during the month and of this number 5 have been rendered sanitary. Eight vegetable samples were collected and submitted to the Bacteriologist to determine whether or not amoeba is present. There are 53 truck gardens being operated in this City and County.

#### DIVISION OF GARBAGE INSPECTION

Four hundred and ninety-nine first inspections were made on garbage cans and 38 re-inspections, a total of 537. Forty-two cases of defective or no garbage cans were found during the month, 31 of these nuisances being abated. Four warrants for the arrest of scavengers for violation of the rules of this Department were issued during the month.

#### DIVISION OF PLUMBING INSPECTION

A total of 1447 inspections in construction, on complaints and on work granted by permit were made.; 727 sewers, 63,710 feet of cast iron pipe, 38,730 feet of ironstone pipe and 476 curb traps were also inspected. Ninety-eight complaints of defective plumbing were received during the month, 66 of which have been abated by repair. One hundred and forty-six plans were submitted representing 181 buildings.

The figures above given include but five of the inspectors of this Division, as one inspector has been absent the entire month on account of illness.

#### **BOARD ACTIONS**

. Twenty new cases of insanitary premises were brought before the Board of Health for action during the month. There were ten condemnations on insanitary premises. Eighteen nuisances were abated by repair, ten by demolition and two by vacation. Nineteen cases were in process of abatement during the month.

#### DIVISION OF LABORATORIES

On page 18 will be found a full report of the work performed in the chemical laboratory, which must be referred to in order to get an intelligent idea of the character of the work performed in this Division. The report of the Bacteriologist appears on page 17, and will clearly indicate the amount of work performed in this Division.

Inasmuch as this city is located on the edge of the Western Hemisphere, and the influx of Hindus and other Asiatics, with the consequent danger of the importation of tropical diseases, such as amoeba, uncinariasis (hook worm), Beri Beri, etc., presents a condition of affairs that will require the attention of the Health Department to properly regulate, it is recommended that the scope of the work of the bacteriological laboratory be enlarged to the extent of adding an assistant whose duty it would be to engage in research work in connection with the class of diseases above enumerated. In this way much practical and valuable work can be accomplished and the results obtained would not alone benefit San Francisco and the Pacific Coast but the entire United States as well. If this plan were adopted much valuable data could be collated in statistical form, and through the medium of proper publication would prove to be of great assistance to this department and the medical fraternity in general.

#### **ARRESTS**

Forty-two arrests were made during the month. Nine for violation of Ordinance No. 660, regulating the disposal of milk; 15 (Ord. 229) regulating construction of dairies; 3 (Ord. No. 655) Meat Ordinance; 5 for violation Sec. Penal Code 373, maintaining a nuisance; 4 (Ord. No. 1031) regulating use of receptacles for beverages; 3 (Ord. 13) wire screen ordinance; 2 (Ord. No. 162) gathering water cress within 1000 feet of sewer outlet; 1 for violation State Food Law.

#### FINES IMPOSED

Two hundred and sixty-five dollars in fines was imposed on offenders arrested during the month of May, and \$95.00 on offenders from previous month—a total of \$360.00.

## CHEMICAL LABORATORY

A. C. BOTHE, M. D., Chief Chemist.

FRED WEST, 1st Asst. Chemist. GEO. AHLERS, 2nd Asst. Chemist.

During the month of May 373 milk samples, 9 Hamburg steak, 3 cream, 2 evaporated milk, 8 ice cream, 1 chopped pork and 24 water and 6 toxicological samples were analyzed. A total of 426. Fifty milk samples sufficiently low to warrant arrest and 5 meats containing sulphites, therefor in all 55 cases were submitted for arrest.

## REPORT OF HEALTH OFFICER, W. F. McNUTT, JR., M. D.

For Month of June, 1910

Four hundred and forty-two deaths were registered this month—thirty-four less than in June, 1909, and thirty-nine less than in the same month of 1908. Annual mortality rate in 1909 per thousand of population was 12.24 (est. pop. 475,000); this month it is 11.16 (est. pop. 475,000); in 1908 it was 13.44 (est. pop. 425,000).

The following comparative tables will show the deaths from some of the principal causes during the month of June, for the past

three years:

#### **DEATHS**

	1908	1909	1910
Table of deaths, all causes	481	476	442
Tuberculosis	38	44	48
Pneumonia, Lobar.	25	27	15
Pneumonia, Broncho	11	9	18
Organic Heart Disease	49	65	73
Bright's Disease	19	32	24
Diseases Digestive System	42	45	47
Typhoid Fever	4	6	10
Diphtheria	6	4	6
Scarlet Fever	2	5	1
Whooping Cough	2	6	3
Diseases Early Infancy	15	19	11
Old Age	7	10	12
Deaths from violence	63.	62	37

#### **BIRTHS**

Births registered total 536, as against 589 in June, 1909, and 603 in the corresponding month of 1908. The annual birth rate in June, 1908, was 16.92 (est. pop. 425,000); in 1909 it was 14.88 (est. pop. 475,000); this month it is 13.53 (est. pop. 475,000). The figures for this month, while not approaching the registration in the corresponding months of the two previous years, is a normal one, as in 1908-09 the number was considerably increased on account of the movement compelling complete registration. There is a difference of 53 births in favor of June, 1909, as compared to the current month.

#### **CONTAGIOUS DISEASES**

The following table will indicate the number of principal cases of contagious diseases reported during this month, as compared with the corresponding months of 1908 and 1909:

	1908	1909	1910
Diphtheria	57	38	33
Scarlet Fever	23	42	33
Smallpox	28	2	1
Measles	188	108	106
Whooping Cough	7	23	38
Mumps	10	25	12
Pneumonia	18	37	32
Chicken Pox	33	29	7
Tuberculosis	50	88	107
Typhoid	35	28	*29

^{*}Note: Of These cases 14 were of local origin and 15 not local.

A study of the above table will readily indicate that there is a decrease in the number of cases of contagious diseases reported during this month, as compared to the same months in the two previous years. Without a doubt this condition can be attributed to the rigid medical school inspection which now obtains in nineteen of the eighty schools throughout the city. Reference to the report of the Division of School Medical Inspection, which appears on page 16 of this bulletin, will prove interesting.

#### DIVISION OF SANITARY INSPECTION

In this division 47 original complaints of nuisances filed during the month were investigated, and 16 unabated complaints at the last report were also handled; 36 nuisance complaints were abated; 4 indicated no cause, 7 were referred to other departments, and 16 remain unabated. Inspections were made as follows: 121 first inspections, 349 re-inspections and 240 special inspections;

Quarantines were placed as follows: For diphtheria, 33; scarlet fever, 33; smallpox, 1. Contagious diseases investigated: Measles, 106: typhoid, 44; whooping cough, 38; mumps, 12; chicken-pox, 7; pneumonia, 32; a total of 316. Two cases of erysipelas, 4 of rotheln, and 4 cases of glanders were also investigated.

With reference to the number of nuisances complaint investigated, it must be borne in mind that this represents but a small part of the complaints filed in this office. The bulk of complaint investigations are being handled by the U. S. P. H. and M. H. S., under A. A. Surgeon Geo. M. Converse, who has five inspectors in the field handling this class of complaints.

#### DIVISION OF DAIRY AND MILK INSPECTION

During the month twenty-seven dairies of counties outside of the city were investigated, and eighty-five within the city limits inspected. 122 dairy depots in the city and county were also inspected. 7753 cows were examined, 13 were placed in quarantine, and 5 were condemned and killed as being unfit for food. One horse attached to a dairy and found afflicted with glanders was also destroyed; 109 milk cans found to be unfit for further use were condemned. Twelve samples of water used in dairies were taken for chemical analysis. In the division of milk inspection 230 samples were taken for chemical analysis, 49 of these being from milk wagons, 176 from railroad depots, one from depots and dairies, four from miscellaneous sources. Reference to the report of the Chemist, which appears on page 17 will show the result of the examination of these samples and the number found below tated standard and city ordinance, together with arrests made of violators.

#### DIVISION OF FOOD AND MARKET INSPECTION

600 inspections were made by the two food inspectors, 77 of these being commission houses, 36 fruit stores, 291 grocery stores, 172 hotels and restaurants, 2 bakeries, 3 butcher shops, and 8 miscellaneous inspections. 47 samples of food stuffs were taken for chemical analysis, and the result will show under the heading of the report of chemist. 22 nuisances of insanitary premises were abated by written notice. The 5 market inspectors condemned and destroyed as being unfit for food 8825 pounds of fish, 15,440 pounds of beef, 166 calves, 17 sheep, 17 lambs, 16 hogs, 584 chickens, 29 turkeys, 68 rabbits, and 11 calves' and hogs' heads. A total of 2637 inspections were made by these inspectors during the month, and a reference to the report of the Division of Market Inspection on page 14 will indicate very clearly the good work that is being performed by this corps of inspectors. The present forceat the command of this office is hardly sufficient to give the very best results, as there is a large territory to cover, and all points of meats shipped into the city from outside places must be carefully covered, and all meat passing through is rigidly inspected. The abbatoirs in Butchertown must necessarily be covered, and the retail meat markets, likewise sausage factories, etc., scattered throughout the city must be also investigated. Therefore it can readily be seen that this corps of inspectors are performing good work under very adverse conditions. A proposed meat ordinance adopted by the Board of Health, if adopted by the Board of Supervisors and additional inspectors furnished for the proper enforcement of the provisions of said ordinance will give the Health Department better facilities for handling the meat question, and the employment of 12 additional market inspectors will render it counties. The Board of Supervisors have been requested to pass as an ordinance the proposed measure of the Board of Health, and have ikewise been requested to provide funds for the employment of 12 additional inspectors.

#### DIVISION OF SCHOOL MEDICAL INSPECTION

Owing to the fact that the public schools were closed on June 10th for the annual vacation, but 82 visits were made to schools and 116 visits to the homes, a total of 198. During the first ten days of June thirteen children were excluded from attendance, who were found to be suffering from various contagious diseases. Reference to the report of this division, which appears on page 16, will prove to be of much interest, as it clearly indicates the good work being done in this important division.

#### DIVISION OF PLUMBING INSPECTION

The six inspectors in this division made 1392 inspections on construction work on completion and on work granted by permit 56 sewers were also inspected, and 55,210 feet of cast iron and 19,355 feet of iron stone sewer material were also inspected. 411 curb raps were also investigated. 109 complaints of nuisances (defective plumbing) were received during the month, and 44 cases arried over from last month were again inspected. 80 nuisances were abated and 16 referred to other departments, 15 were marked No cause," and 42 complaints remain unabated. 153 plans for new buildings were submitted, representing 165 buildings, and 116 permits were issued for repair work. A full and detailed report of the work of this division appears on page 15.

#### **BOARD ACTIONS**

The Board of Health acted on 17 new cases of insanitary premises brought before them during the month. 15 insanitary premises were condemned and abatements show as follows:

By repair, 1; by demolition, 9; by vacation, 3: a total of 13. 22 cases were in process of abatement at the close of June.

#### DIVISIONS OF LABORATORIES

Particular attention is called to the report of the Chemist of the Department, which appears in detail on pages 17 and 18. In order to get a clear idea of the work being done with reference to analysis of milk samples, and also the drinking water supply, his report should be carefully read. The showing made with reference to milk below standard is of particular importance, and his report also indicates the number of offenders arrested for violation of this law

his report also indicates the number of offenders arrested for violation of this law.

Bacteriological Laboratory:—The report of the bacteriologist and toxicologist appears on page 16. This month marks the lose of the toxicological division of this department. For years this work has been performed by this Department for the benefit of the City and County Coroner, the expense being borne by the Health Department. Provision has been made in the budget for 910–11 whereby the coroner appoints his own toxicologist, thereby relieving this office of said duty.

#### **ARRESTS**

61 arrests were made during the month—19 for violation of Ordinance No. 660, relating to the disposal of milk, 9 for violation of Ordinance No. 229, regulating construction of dairies; 3 for violation of the meat ordinance, No. 655; 14 for violation of Ordinance No. 461 (screen ordinance), and 16 others for violation of various ordinances as indicated in a report under the heading of "Record f Arrests," which appears on page 19. A particular reference is made to this report, as it will clearly indicate the work that is seing done by this Department, in the direction of a rigid enforcement of the Health laws and regulations. The fines imposed upon ffenders will also be found under this heading.
